Rishi Negi

Frontend Engineer · React · TypeScript · Vite · Tailwind

London, UK · +44 7741 812978 · rishi@rishinegi.com · LinkedIn · GitHub · Portfolio

SUMMARY

Frontend developer with experience building React applications for field sales teams at RapinnoTech, including new features and products for an offline quote tool used by HDFC Life insurance agents in the field. Helped rework a multi-page flow into a single page and pull its state logic out of Redux. Since then, working on full-stack projects, including a job application tracker.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, Responsive design, Tailwind CSS

APIs & Tooling: REST APIs, GraphQL, Git, Jenkins (CI/CD), Figma, Vite, Vitest, ESLint, AI-assisted development (Claude Code)

Backend (self-taught, via personal projects): Node.js, Express, PostgreSQL, SQL, Prisma, JWT

PROJECTS

Job Application Tracker · GitHub — React, TypeScript, Express, Prisma, PostgreSQL, Vitest — *in development*

- Built a full-stack web app where job seekers log applications and track their status, with the Node.js/Express backend, JWT login and per-route access control written from scratch alongside the React frontend
- Shared 3 Zod schemas between client and server so validation is defined once instead of twice, and used TanStack Query for client-side caching

Portfolio Website · GitHub — React, TypeScript, Vite, Tailwind CSS, GSAP, Vercel

- Built the site to show how each project works, including a scroll-drawn architecture diagram and a replay of real CLI output; supports keyboard use, reduced motion and screen readers (Lighthouse mobile: 100 accessibility, 92 performance); built with Claude Code from a written brief, reviewing every diff

cleanDeps CLI · GitHub — Node.js, npm

- Published a CLI to npm that lets developers reset a broken node_modules in one command, working across npm, yarn and bun and checking for package.json before wiping and reinstalling

EXPERIENCE

Software Developer · RapinnoTech — Hyderabad, India May 2022 – August 2023

- Developed features for HDFC Life's offline quote tool in React and added new products to it with product managers over Agile sprints, so insurance sales agents could quote in the field; quote generation became 50% faster
- Helped redesign the app into a single page, after management asked to collapse a 2–3 page flow into one screen; walked senior product management through the codebase on planning calls
- Worked directly with developers to extract the core state logic from Redux and rebuild it for the single-page version, and fixed the bugs and blockers they hit along the way
- Handled Redux sign-in and session logic, REST calls and token handling, fixing recurring agent sign-in failures
- Used Jenkins CI/CD pipelines as part of the team's build and release workflow
- Rebuilt the Employee Notifier UI in React with shared Button, Modal and Tab components the product team adopted
- Built responsive screens from the designers' Figma files and redesigned the main screens, raising user engagement by 20%

Software Engineer · Coforge — Greater Noida, India 2019 – 2022

- Automated recurring operational reports with shell scripts, cutting manual reporting time for 5–6 business teams
- Supported a live production system for British Airways, resolving ~350 incidents per year within SLA
- Led the migration of production servers from RHEL5 to RHEL7 for business-critical workloads

ADDITIONAL EXPERIENCE

Colleague · Tesco — London March 2024 – Present

EDUCATION

MSc Software Engineering · University of West London October 2023 – July 2025

- Dissertation: comparative evaluation of GraphQL and REST API integration approaches

BTech Computer Science · DIT University 2014 – 2018
