Rishi Negi

Frontend Engineer · React · TypeScript · Vite · Tailwind

London, UK · +44 7741 812978 · rishnegi28@gmail.com · LinkedIn · GitHub · Portfolio

SUMMARY

Frontend engineer with 4+ years in software engineering, including production React and JavaScript at RapinnoTech building insurance quote and field-agent tools. Extending into full-stack with TypeScript and Node.js/Express projects, backed by a BTech in Computer Science and an MSc in Software Engineering.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, Tailwind CSS

APIs & Tooling: REST APIs, GraphQL, Git, Vite, Vitest, ESLint

Backend (self-taught, via personal projects): Node.js, Express, PostgreSQL, JWT

EXPERIENCE

Software Developer · RapinnoTech — Hyderabad, India May 2022 – August 2023

- Built the React frontend for HDFC Life's offline quote tool, so insurance sales agents could generate quotes in the field; quote generation became 50% faster
- Helped redesign the app into a single page, after management asked to collapse a 2–3 page flow into one screen; walked senior product management through the codebase on planning calls
- Worked directly with developers to extract the core state logic from Redux and rebuild it for the single-page version, and fixed the bugs and blockers they hit along the way
- Handled sign-in and session logic in Redux, including REST API calls and token handling, and fixed the sign-in failures field agents kept reporting
- Rebuilt the Employee Notifier UI in React and wrote shared Button, Modal and Tab components that the rest of the product team then adopted
- Added new products to the app with product managers over Agile sprints and redesigned the main screens, raising user engagement by 20%

Colleague · Tesco — London March 2024 – Present

- Customer-facing role held alongside my MSc and the projects below

Software Engineer · Coforge — Greater Noida, India 2019 – 2022

- Automated recurring operational reports with shell scripts, cutting manual reporting time for 5–6 business teams
- Supported a live production system for British Airways, resolving ~350 incidents per year within SLA
- Led the migration of production servers from RHEL5 to RHEL7 for business-critical workloads

PROJECTS

Job Application Tracker · GitHub — React, TypeScript, Express, Prisma, PostgreSQL, JWT, Tailwind CSS, Zod, Vitest — *in active development*

- Designed and built a Node.js/Express backend from scratch alongside the React frontend, covering JWT authentication, per-route access control, and full CRUD across applications, statuses, and user accounts
- Unified validation across the stack with 3 shared Zod schemas, removing duplicate client/server validation logic, and used TanStack Query for client-side caching

cleanDeps CLI · GitHub — Node.js, npm

- Published a cross-platform CLI to npm supporting 3 package managers (npm, yarn, bun), validating package.json presence before safely wiping and reinstalling node_modules

EDUCATION

MSc Software Engineering · University of West London October 2023 – July 2025

- Dissertation: comparative evaluation of GraphQL and REST API integration approaches

BTech Computer Science · DIT University 2014 – 2018

Additional skills: React Hook Form, Prisma, bcrypt, Zod, TanStack Query, Prettier, SQL, Shell scripting, Linux
